

ANVS-2348

NIGHT VISION BINOCULAR

- Dual tube design
- US Made Gen 3 Image Intensifiers
- Automatic brightness control and automatic cut-off function
- Increased depth perception
- Single battery operation
- Compact & Lightweight
- Adapts to a standard military headgear or helmet mounts and to PVS-7A face mask
- Close-up IR illuminator
- IR On/Off & Low Battery indicator

The **ANVS-2348** is a night vision binocular designed for ground-based missions that require superb performance and added user acuity. In binocular configuration each eye receives an independent image improving the user's ability to judge distances and relative motion. As a result, the user's ability to operate a vehicle or to maneuver in the dark improves dramatically. The binocular features close-up IR illuminator that enhances close hand task performance in extreme darkness. It is also equipped with IR On/Off and Low Battery indicators. With the help of a pair of 3x lenses, it can be converted to a hand held long range binocular. For hands-free operation it can be mounted onto standard military headgear or helmet mount. By quickly replacing the standard mounting assembly for a dovetail style mount, the binocular can be mounted onto a PVS-7A style facemask. Covered by two-year warranty.
